DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Lewis et al. (US Patent 6,497,093).

Regarding claims 1, 2, 8, Lewis discloses an open loop air fuel ratio controller comprising:

a detector (53) arranged down stream of a catalyst (52) and adapted to detect rich breakthrough (see Figure 1),

a catalyst model having an estimator adapted to estimate a stored oxygen level in the catalyst (see col. 10, lines 50-58); a comparator adapted to compare an estimated stored oxygen level with a plurality of predetermined thresholds, and a demand adjusting means for adjusting an air fuel ratio demand in dependence upon a received signal from said comparator and upon a received signal from said detector (see col. 6, lines 23-27, col. 16, lines 5-59).

Regarding claims 3-4, 9, Lewis further discloses adjusting the model in dependence upon a received signal from said comparator and upon a received signal from said detector (see col. 10, lines 51-56).

Art Unit: 3748

Regarding claim 5, Lewis further discloses that the model adjusting means does not adjust the model when the demand adjusting means adjusts the air fuel ratio (see col. 15, lines 30+).

Regarding claim 6, Lewis further discloses that said model adjusting means is arranged to adjust the model to reduce or increase a maximum oxygen storage value (see col. 11, lines 50-65, col. 12, lines 1+, col. 13, lines 1+).

Regarding claim 7, Lewis further discloses that the detector is heated exhaust gas oxygen sensor (see col. 15, lines 1-3).

Regarding claim 10, Lewis further discloses adjusting the air fuel ratio demand step comprises the sub-step of if the estimated oxygen storage level is less than a first predetermined threshold then the air fuel ratio demand is adjusting in a rich direction (see col. 16, lines 16-31).

Allowable Subject Matter

Claims 11-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
